The usable signal is epistemic input-sensitivity, not a static feature
single-pass feature probe (trained reference)
1 forward pass
frozen features
MLP probe
trained
fails
7-Scenes: < built-in
Frozen model f
same weights
N perturbed passes
align → disagreement
uncertainty U
works
epistemic signal
ReVar3R (training-free, multi-pass)
Same frozen model: one pass cannot decode the error linearly; re-running under perturbation exposes it.
